SHAIK SUHAIL

Computer Science Student | Aspiring ML/MLOps Engineer | AWS & Cloud | Technical Community Leadership

+91-8247793270 | GitHub | LinkedIn | shaiksuhail74818@gmail.com

SUMMARY

Computer Science undergraduate focused on machine learning and MLOps, building reproducible ML pipelines and deploying applications on AWS. Hands-on experience with model training, experiment tracking, containerization, and cloud deployment, combined with technical leadership through the AWS Student Builder Group, where I coordinated workshops and a hackathon for the student developer community.

TECHNICAL SKILLS

Languages: Python, C, Java

Machine Learning & Data: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, EDA, Feature Engineering, Hyperparameter Tuning

MLOps: MLflow, DVC, Git, GitHub Actions, CI/CD, Experiment Tracking, Model & Dataset Versioning

Cloud & DevOps: AWS (Elastic Beanstalk, IAM), Amazon Bedrock, Azure App Service, Docker

Backend & APIs: FastAPI, Flask, Streamlit

LEADERSHIP & TECHNICAL COMMUNITY

AWS Student Builder Group — RGUKT Ongole *Technical Associate*

- Coordinated planning and execution of technical workshops and cloud learning sessions, promoting AWS Cloud technologies among students.
- Co-organized 2 technical events and 1 hackathon with the student builder team, contributing to technical coordination and on-ground execution.
- Collaborated with team members to strengthen the student learning community around cloud computing and developed hands-on AWS proficiency through active engagement in Student Builder Group initiatives.

PROJECTS

Internship Intelligence Platform (Internship Scam Prediction) — In Progress *Python, ML, MLOps, MLflow, AWS, Amazon Bedrock, FastAPI, Docker*

- Building an ML pipeline to flag potentially fraudulent internship postings, using MLflow for experiment tracking and a reproducible MLOps workflow.
- Integrating Amazon Bedrock to develop an AI-powered chatbot component and connecting model inference to a FastAPI backend.
- Containerizing the application with Docker and using AWS services to support application infrastructure and workflow.

House Price Predictor *Python, Flask, Scikit-learn, AWS, CI/CD, MLOps*

- Built an end-to-end regression pipeline in Scikit-learn, applying regularization and k-fold cross-validation to optimize model performance ($R^2 \approx 0.97$ on the evaluation set).
- The application was deployed in AWS Elastic Beanstalk with GitHub Actions CI/CD, configuring IAM for secure access. GitHub →

Titanic Survival Analysis (EDA) *Python, Pandas, NumPy, Matplotlib, Seaborn*

- Performed exploratory data analysis and feature engineering, resolving multicollinearity and skewness to identify key survival predictors. GitHub →

Independent MLOps Learning *#100DaysOfMLOps*

- Practicing end-to-end MLOps with DVC (multi-stage pipelines, dataset/model versioning, S3-compatible remotes) and MLflow (experiment tracking) across the workflow: data → pipeline → training → tracking → evaluation → API → Docker → deployment.

EDUCATION

Rajiv Gandhi University of Knowledge Technologies (RGUKT), Ongole *Expected 2029*

B.Tech, Computer Science and Engineering | CGPA: 8.58/10

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Linear Algebra, Probability & Statistics, OOP

CERTIFICATIONS & ACHIEVEMENTS

- Supervised Machine Learning: Regression & Classification — DeepLearning.AI / Coursera
- AWS Builder Jacket Winner — Amazon Web Services
